

The EagleGate PL-20™

***The Simple, Safe
and Trouble-Free
Automated
Gate Operator***

From its heavy-duty motor and multiple access options to its easy installation, the EagleGate PL-20 sets the industry standard for push-pull method gate operators.

***The P-20 (Push-Pull) Gate
Operator (AC/DC and Solar)***

The PL-20™

(Push-Pull) Gate Operator
(AC/DC and Solar)

Powerful, Efficient and Long Lasting

The PL-20 gate is the perfect solution for automating gates that are mounted to wood or steel posts. It's powered by a heavy-duty DC motor that's built for the long haul. Features include:

- **A high-precision sealed and double ball-bearing design;**
- **Long-life, high-grade carbon brushes;**
- **Synthetic grease for extreme temperature protection;**
- **Rust- and corrosion-resistant housing;**
- **Stainless steel driveshaft.**

The PL-20 features a commercial quality actuator that enables it to handle gates up to 20 feet long. The square design of its steel extension shaft prevents accidental tube rotation while the motor is operating, dramatically reducing the potential for operator damage.

Neat and Safe

The PL-20 is pre-wired to the fullest extent possible. Only the motor cable needs to pass under the driveway to the slave side.

Multiple Access Options

A range of access options are available for the PL-20, including keypads and phone-entry systems. EagleGate originated the horn-activated micro-processor with its 2KZ control board, and EagleGate's SSK board includes the siren-operated sensor (SOS) for emergency access. The SSK board is UL-325 compatible, and our SKE control board is being developed for full UL-325 compliance.

Easy Installation

The PL-20 is easily installed with heavy-duty post mounting brackets. The pivot arm (3/8" x 1 1/4" x 10") can be adjusted for the most precise and consistent gate alignment. EagleGate technicians are readily available to offer help and advice as needed.

About EagleGate

For 17 years, EagleGate has pioneered many of the industry's most important innovations including "two wire simplicity," the patented Siren-Operated Sensor (SOS), the patented "lift and rotate" gate operator and, most recently, the revolutionary new Elliptical column-mounted technology.
